

Contents

1 The Detection and Assessment of Meteorological Object Parameters by Airborne RS	1
1.1 Flight of Air Vehicles in Wind and Atmospheric Turbulence	1
1.1.1 The Spatial Wind Field in the Earth's Boundary Layer ...	1
1.1.2 Wind Shear	3
1.1.3 Atmospheric Turbulence	5
1.2 The Detection of Wind Shears, Dangerous for Flights and Zones of Intensive Turbulence with the Use of Airborne RS	7
1.3 The Requirements to Airborne RS at the Detection of Zones of Dangerous Wind Shears and Turbulence	18
1.3.1 The Requirements to a Zone, Method and Period of RS Review	18
1.3.2 The Requirements to the RS Resolution	20
1.3.3 The Requirements to the RS Accuracy	20
1.3.4 The Requirements to Parameters of the RS Probing Signal	21
1.3.5 The Requirements to the Pattern of the RS AS	22
1.3.6 The Requirements to the RS Energy Potential	23
1.3.7 The Requirements to the Dynamic Range of the RS Receiver	23
1.4 Condition of Developments of the Domestic and Foreign RS Providing the Assessment of Zones of Dangerous MO	24
1.4.1 The Analysis of the Condition of Researches on Determination of the MO Parameters by Land RS	24
1.4.2 The Analysis of the Condition of Domestic and Foreign Developments of Airborne RS Regarding Detection and Danger Assessment of MO	26

1.5	Improvement of Methods of Processing of MO Signals in Airborne RS	31
	References	32
2	The Mathematical Model of Detection of Meteorological Objects by Airborne RS and the Assessment of Danger for Air Vehicles Flights	37
2.1	The Structure of the Mathematical Model	37
2.2	The Model of a Meteorological Object in the Conditions of Wind Shear and Turbulence	39
2.2.1	The Parameters of a Meteorological Object Affecting the Efficiency of Radar Observation	40
2.2.2	The Model of a Meteorological Object in the Presence of Wind Shear	41
2.2.3	The Model of a Meteorological Object in the Conditions of Intensive Turbulence	44
2.3	The Mathematical Model of Movement of the Carrier of Airborne RS	47
2.4	The Mathematical Model of a MO Radio Signal	51
2.4.1	The Structure of the Radio Signal Reflected by MO	51
2.4.2	The Power Characteristics of the Radio Signal Reflected by MO	57
2.4.3	The Spectral Characteristics of the Radio Signal Reflected by MO in the Conditions of Wind Shear and Turbulence of the Atmosphere	62
2.4.4	Influence of the Carrier Movement on Spectral and Power Characteristics of the R Signals Reflected by Meteoobjects	70
2.4.5	The Use of Parametric Models for the Description of the Signal Reflected by MO	79
2.5	The Mathematical Model of a Path of Processing of Signals of an Airborne RS	84
	References	93
3	The Methods and Algorithms of Processing of Signals Improving Observability and Accuracy of the Assessment of Parameters of Meteorological Objects of Airborne Radar Stations	97
3.1	The Methods and Algorithms of Processing of Signals of Airborne Meteo RS for the Assessment of Frequency and Width of a MO Doppler Spectrum	98
3.1.1	Nonparametric Methods of the Assessment of Parameters of a Doppler Spectrum of the Signal Reflected by MO	98
3.1.2	Parametric Methods of the Assessment of Moments of a Doppler Spectrum of the Signal Reflected by MO	105

1.5	Improvement of Methods of Processing of MO Signals in Airborne RS.....	31
